RESEARCH INTERNSHIP OPPORTUNITIES

About the project:
Regenerate Lebanon, a program of the NGO Recycle Lebanon, is a platform for conscious system change with a mission to strengthen the circular economy to promote sustainable development solutions. The online site will aggregate dispersed data about interconnected social and environmental issues. In doing so, the platform will facilitate access to information and then integrate opportunities for action, visualize data in unique ways for reuse, and incentivize users to scale game-changing solutions by means of interconnectivity across sectors and encourage long-term nature-based solutions.

The main goals of the site are:
• To access information regarding up-to-date socio-environmental problems and local solutions
• To provide a platform which directly connects sectors with beneficiaries to solve socio-economic issues while building connections between stakeholders that will allow people to collaboratively develop innovative social solutions online and offline
• To aid in an industrial transition towards regenerative systems and a circular economy (i.e. reducing single use plastic use and disposal, designing non-recyclable materials out of production)
• To promote actions tied to sustainable development goals that will slow climate change and regenerate natural resources

Duties and responsibilities
Regenerate Lebanon is looking for dedicated interns who are seeking mentorship, experience with web development processes, experience working with an NGO, and who are looking to develop their communications and research skills. We hope to find enthusiastic individuals who are passionate about using technology and data to drive social and environmental change. Interns will primarily help with data entry and transformation, communications and outreach, and copywriting content for the website. We are seeking skilled individuals to perform the following tasks:
• Transform datasets into the appropriate formats for inclusion on the website
• Develop a glossary of terminology to be integrated on the platform
• Research various entities to fill in missing data within datasets
• Help with content creation for the website
• Compile and organize incoming datasets
• Help with media communications

Qualifications
• Excellent technology skills, including experience in data entry and management
• Great communication and writing skills
• Advanced research capabilities
• Ability to work independently and under strict deadlines
• Fluency in English required, Arabic Fluency preferred

Application deadline: December 15th
Assignment duration: 3 - 6 months

How to apply:
Send a cover letter and CV/resume to sawa@regeneratelb.org specifying your interest in the position. Include any relevant experience including past work and education, research, and data entry/management experiences and any personal or intellectual connection to the project (i.e. familiarity with environmental issues in Lebanon). Only shortlisted candidates will be contacted.
